

HealthSync — 3-Minute Web Demo Script

EC7205 Cloud Computing Assignment 2

Live Application: <https://sthealthsyncweb.z13.web.core.windows.net>

Front Door: <https://healthsync-dev-g4fkf8a2dteza8ab.z01.azurefd.net>

Segment	Content	Time
1	Homepage & Public Pages	0:00 – 0:40
2	Patient Registration & Login	0:40 – 1:10
3	Doctor Browsing & Booking	1:10 – 1:50
4	Dashboard & Notifications	1:50 – 2:20
5	Doctor Portal & Prescriptions	2:20 – 2:50
6	Wrap-Up	2:50 – 3:00

Segment 1: Homepage & Public Pages

0:00 – 0:40

Open the app in browser. Start at the homepage.

1. **Hero Section** — Scroll briefly. Show the hero banner with “*Book Your Doctor*” call-to-action and the live statistics (doctors, patients, appointments count).
2. **Featured Doctors** — Scroll down to the featured doctors carousel. Point out doctor cards with ratings, specialization, and consultation fees in LKR.
3. **Services Page** — Click **Services** in the navbar. Briefly show the 6 service cards (Find Doctors, Book Appointments, Prescriptions, Notifications, Health Records, Security).
4. **About Page** — Click **About**. Flash the mission statement and team section.

Say: “*This is HealthSync, a cloud-native healthcare platform built with 7 microservices on Azure. Let me show you the key user flows.*”

Segment 2: Patient Registration & Login

0:40 – 1:10

1. Click **Get Started** or **Sign In** in the navbar.
2. **Register Page** — Show the registration form (First Name, Last Name, Email, Password, Confirm Password). Point out the Google OAuth button.
3. **Google Sign-In** — Click “*Sign in with Google*” to demonstrate OAuth 2.0 flow. (*Or register with email if preferred.*)
4. Once logged in, you land on the **Patient Dashboard** automatically.

Say: “*Users can register with email or Google OAuth. Authentication uses JWT tokens managed through our API Gateway.*”

Segment 3: Doctor Browsing & Booking

1:10 – 1:50

1. Click **Find Doctors** in the navbar.
2. **Search & Filter** — Type a name in the search bar. Change the specialization dropdown (e.g., Cardiology). Show results updating.
3. **Doctor Detail** — Click on a doctor card. Show the full profile: qualifications, experience, bio, languages, patient reviews, and consultation fee.
4. **Book Appointment** — Select a date and time slot. Click **“Pay Now & Book”** to show Stripe checkout integration. *(Or click “Confirm Booking” for pay-later flow.)*
5. Show the success confirmation / redirect to Appointments page.

Say: *“The Doctor Service provides search and filtering. Appointments go through the Appointment Service, and payments are handled via Stripe integration.”*

Segment 4: Dashboard & Notifications

1:50 – 2:20

1. Navigate to **Dashboard**. Show the patient dashboard with upcoming appointments, recent prescriptions, and health summary cards.
2. Click **Appointments** in the navbar. Show the appointments list with status badges (Pending, Confirmed, Completed, Cancelled).
3. Click the **bell icon** or navigate to **Notifications**. Show real-time notifications (appointment confirmations, prescription alerts).
4. Briefly click **Profile** to show the profile management page.

Say: *“Patients get a unified dashboard. The Notification Service runs on Python FastAPI and pushes real-time alerts via Azure Service Bus.”*

Segment 5: Doctor Portal & Prescriptions

2:20 – 2:50

(Log in as a doctor account, or switch accounts.)

1. Show the **Doctor Dashboard** with today’s appointments, patient queue, and quick stats.
2. Click on a completed appointment. Click **“Write Prescription”** to open the prescription form.
3. **Prescription Form** — Show adding medications (name, dosage, frequency, duration), diagnosis, and notes. Submit.
4. Navigate to **My Schedule** (Doctor Availability page). Show setting available time slots.

Say: *“Doctors manage appointments and write digital prescriptions. The Prescription Service stores records securely, and patients receive instant notifications.”*

Segment 6: Wrap-Up

2:50 – 3:00

Say: *“That’s HealthSync — a fully cloud-native healthcare platform running 7 microservices on Azure Container Apps, with a React frontend on Azure Blob Storage behind Azure Front Door. The system uses PostgreSQL, Cosmos DB, Redis caching, and Azure Service Bus for event-driven communication. Thank you.”*

Pre-Demo Checklist

- App is live and accessible at the Front Door URL
- Have a patient test account ready (or register live)
- Have a doctor test account ready (pre-verified by admin)
- At least 1 existing appointment in “Confirmed” status for prescription demo
- Browser zoom set to 90–100%, bookmarks bar hidden
- Screen recorder running (OBS / Windows Game Bar / browser extension)
- Microphone tested

Recording Tips

- Use **1920×1080** resolution for crisp recording.
- **Slow your mouse** — move deliberately so viewers can follow.
- **Pause 1–2 seconds** on each page before clicking the next thing.
- If something loads slowly, fill time with narration about the architecture.
- Record in one take if possible; edit out long pauses afterwards.
